On 16 December 2014, Autodesk announced an agreement to acquire Sublime Software, parent company of SynthCAD. Sublime was fully integrated into Autodesk products by the end of 2015, following the release of AutoCAD Cracked 2022 Latest Version 2016. In December 2019, Autodesk acquired the startup Cirrus Logic, a provider of 3D sensors for augmented and mixed reality. AutoCAD Activation Code is a high-end computer-aided design (CAD) and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps.

In December 2019, Autodesk acquired the startup Cirrus Logic, a provider of 3D sensors for augmented and mixed reality. The initial target market for AutoCAD was small business and commercial users. By the time it was sold to Autodesk, the majority of AutoCAD users were business users. AutoCAD is an end-user application and there is very little, if any, corporate need for customisation. On 30 December 2013, Autodesk and Corning Incorporated announced that they would combine Autodesk's Corning operations in the U.S. with Corning's Corning Precision Optics in Australia and New Zealand. Microsoft Visual Studio is integrated with AutoCAD through the Visual Studio extension, "AutoCAD Tools for Visual Studio." This allows users of Visual Studio to work with AutoCAD features like getting data from AutoCAD or plug-ins. AutoCAD's JavaScript API, AutoLISP, Visual LISP and VBA, allows developers to create applications for AutoCAD. Extensibility AutoCAD supports add-ons written in C++, Visual LISP, Visual Basic, and AutoLISP. There are add-ons available to create custom drawing and editing tools (for example, data processing). AutoCAD has a feature that allows users to extend it. This is called extensibility. It is typically used for tools that would not fit within the design flow, or would be valuable to a particular user group. The first commercial use of this was in 1988, with a router extension for AutoCAD released by both Datakit and Bentley Software. The high-level language used for AutoLISP, AutoCAD Visual LISP (AVL), is similar to AutoLISP and has been considered to be a dialect of AutoLISP. Add-on management For users who like to install, load, and uninstall add-ons, there are a number of add-ons available. These are typically on the Application Store (AppSource), such as those from VISUAL LISP, 3DXD, and OTHERS... Over 100,000 users have installed them! Installers are available for many different platforms, including Mac OS, Windows, and Linux, and it is possible to select a particular platform when the installer runs. AutoCAD creates a license file and an uninstaller when it is installed. It is also possible to use an installation manager to ensure a license is installed each time an application is used. The license file should be installed in the same folder as the application. In Windows it is found under the Windows registry. ObjectARX AutoCAD has a C++ class library called ObjectARX. ObjectARX is used to provide features not provided by the Autodesk Exchange Apps (such as AutoCAD Architecture, AutoCAD Electrical, and AutoCAD Civil 3D) through a variety of communication mechanisms. The integration between AutoCAD and ObjectARX has enabled the development of a range of
